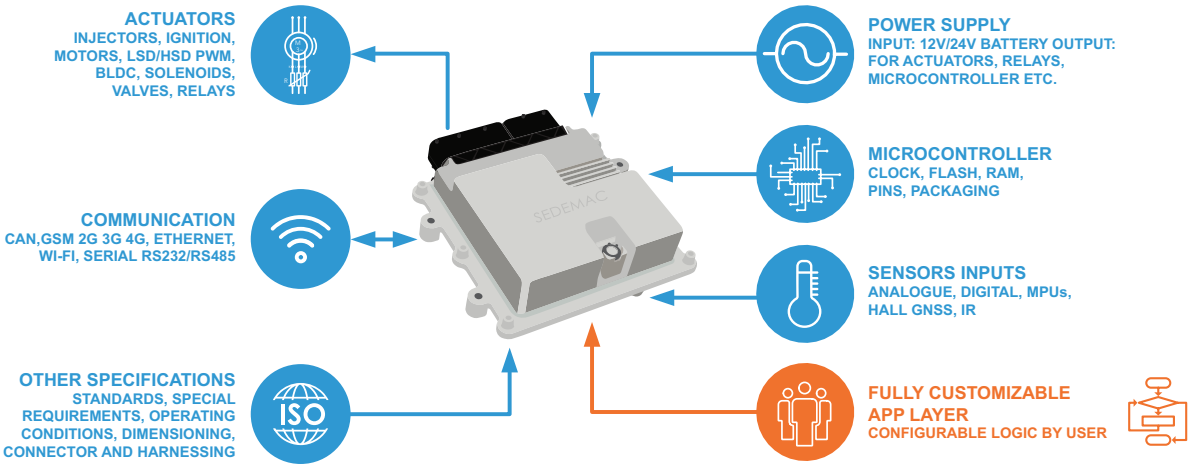
SEDEMAC™

# Custom ECU

**Custom ECUs** are Model-Based Development (MBD) platforms with reliable hardware provided to OEMs which allow them an ease of development of robust and reliable designs with greater flexibility to develop their own applications. Through these platforms, SEDEMAC helps the OEMs to execute their projects faster with a custom, production-ready, embedded (hardware + base software) solution, with an option to own and control the application specific software component (developed with Simulink / Target Link models). SEDEMAC offers Custom ECUs for complete product lifecycle- from product development to large volume supply.

# Custom ECUs -

scalable to meet specifications



SEDEMAC™

# About Company

SEDEMAC Mechatronics is a mechatronic products company engaged in the business control solutions for automotive and off-highway powertrains. The company manufactures a wide range of control products like a variety of AMF genset controllers, electronic governors and variable speed controls for diesel gensets / engines. SEDEMAC's portfolio for gasoline engines / powertrains includes products like Smart Ignition, Integrated Starter Generator (ISG) ECU, Automated Manual Transmissions (AMT) ECU, Electronic Fuel Injection (EFI) ECU and so on.

A group of researchers founded SEDEMAC in 2007 in Mumbai, India. What started as a small lab-based enterprise has now grown into a rapidly growing company that supplies / licenses unique control products to the leading OEMs in India.

Each of the SEDEMAC's products goes through complete cycle of need of identification, development of relevant technology, design of practical products around developed technology, validation of products coordinating with key potential customers, organization of supply chain for series production, delivery to customers and effective after sales product support.

SEDEMAC is #1 in genset market control in India today and is the preferred choice of leading OEMs for unique control products.
